

# TRANSPORT BIOSECURITY MATTERS

**Enhance your biosecurity with real-time trailer monitoring**

**Transport biosecurity** is becoming an important part of a strong biosecurity program. Monitoring trailer movements and biosecurity compliance using a digital dashboard significantly reduces the risk of disease spread.

## Wean to Harvest Biosecurity Gaps

Increasing research evidence is revealing gaps in wean-to-harvest biosecurity. The Swine Health Information Centre (SHIC) [Swine Disease Monitoring Report](#) aggregate data shows breeding herd breaks of PRRS and PED tend to follow breaks in wean-to-harvest sites.

## FARM HEALTH PROTECT SOFTWARE FEATURES

### RECORD REAL-TIME TRAILER MOVEMENT

Track your livestock trailer movements using a FHG Passport GPS device

### INTEGRATE MULTIPLE TRUCK GPS SYSTEMS

View movement data from multiple GPS systems, including livestock trucks, feed trucks and third-party haulers, all in a single dashboard.

### CHECK BIOSECURITY COMPLIANCE

Verify truck fleets and contractors are following your biosecurity policies.

### CREATE TRACE-OUT REPORTS

Easily generate time-saving reports and maps if a disease break is suspected so you can take immediate action.

### SEND DISEASE RISK ALERTS

Send targeted instant messages or emails to employees and third parties in the event of a suspected outbreak.

## Reduce your risk

### Fill in biosecurity gaps with Farm Health Protect

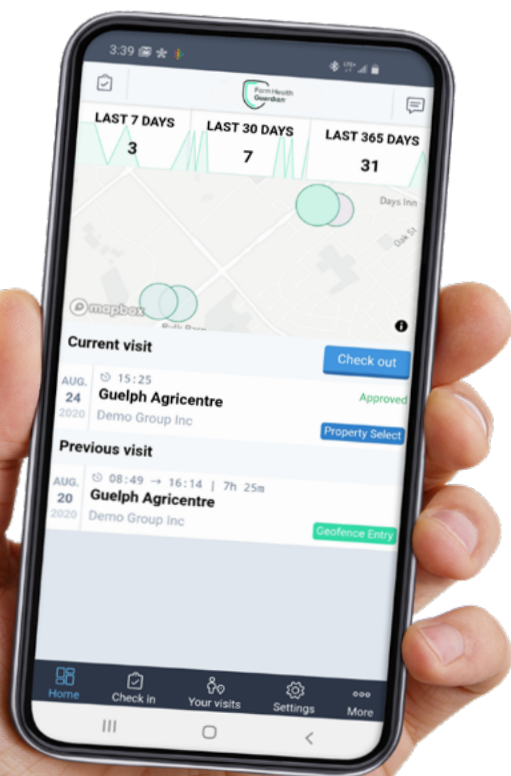

The Farm Health Protect system provides enhanced visibility for farm traffic and reduces the risk of disease transmission with real-time digital recording of all truck and trailer movement on and off your farm property. Ensuring compliance with truck wash, downtime or other requirements can help prevent disease movement from harvest facilities, feed mills and other concentration points back to your farm.

## Passport GPS

For livestock trailers or vehicles that aren't equipped with GPS, use Farm Health Guardian Passport GPS devices to automatically record visits and vehicle movement on and off farm properties.

“People movement and truck movement were the biggest areas where we could find the ASF virus.”

— Dr. Jordan Gebhardt, veterinarian and Kansas State University professor

## BOOST YOUR BIOSECURITY

- ✔ Prevent disease spread in your herd with the most advanced biosecurity management software.
- ✔ Protect your hogs, employees and bottom line.
